## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 7, 9, 11, 13, 15,17, 18-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7 recites the limitation "raw material" in the last line. There is insufficient antecedent basis for this limitation in 1 claim from which it depends. Claims 9, 11, 13, 15, 17, 18-37 are rejected to the extent they depend from a rejected base claim.

Claim 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting an essential element, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted element is: the starting material to which the process steps are applied. Claims 2-6 are rejected to the extent they depend from a rejected base claim.

Art Unit: 1622

Claim 18 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim is improperly dependent. It is believed in the first line "7" should be --- claim 7 --. Correction and/or clarification is required.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vu et al US 7667055, Bombardelli US RE40120 in further view of Holton US 7288665, Holton et al US 6706896 and Bombardelli US 6500966.

Vu et al teach cerium compounds, such as cerium chloride, to be well-known as selective protecting group agents in taxane processes. See, for example, column 96 example 45. Bombardelli '120 teach analogous processes noted that Lewis acids in general have been known for use in

Application/Control Number: 10/585,794

Art Unit: 1622

taxane synthesis as well as other recited reaction components such as tetrahydro furan. See, for example, column 5 lines 25-30. The reason for selective protection of the hydroxyl groups at position C(7) is taught in Holton et al '665. See column 10 lines 34-58 particularly line 53. The use of raw taxane materials in analogous selective reaction processes is well-known as taught by Holton et al US '896 and Bombardelli US '966.

In view of the art as a whole, it would have been obvious to one of ordianry skill in the art to produce synthetic taxanes from raw taxane materials with tertahydro furan solvent, protecting the C(7)-OH using lanthanon type protecting group agent followed by acylation and deprotection as the results would not have been unexpected.

No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Raymond Covington whose telephone number is (571) 272-0681. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Kosar at telephone number (571) 272-0913.

The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
